Revision History

Version	Author	Revision Date	Description of change
V1.1	Cici Wu	Aug 16, 2022	Initial revision

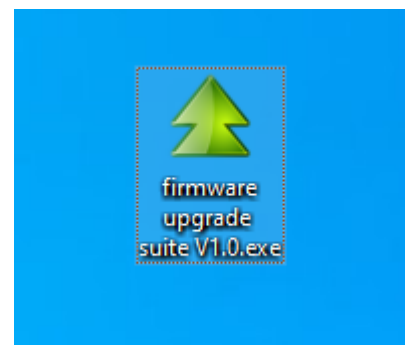

1. PC operation System requirement

Should be Windows operation system only, can't support Mac OS.

2. Software tool preparation

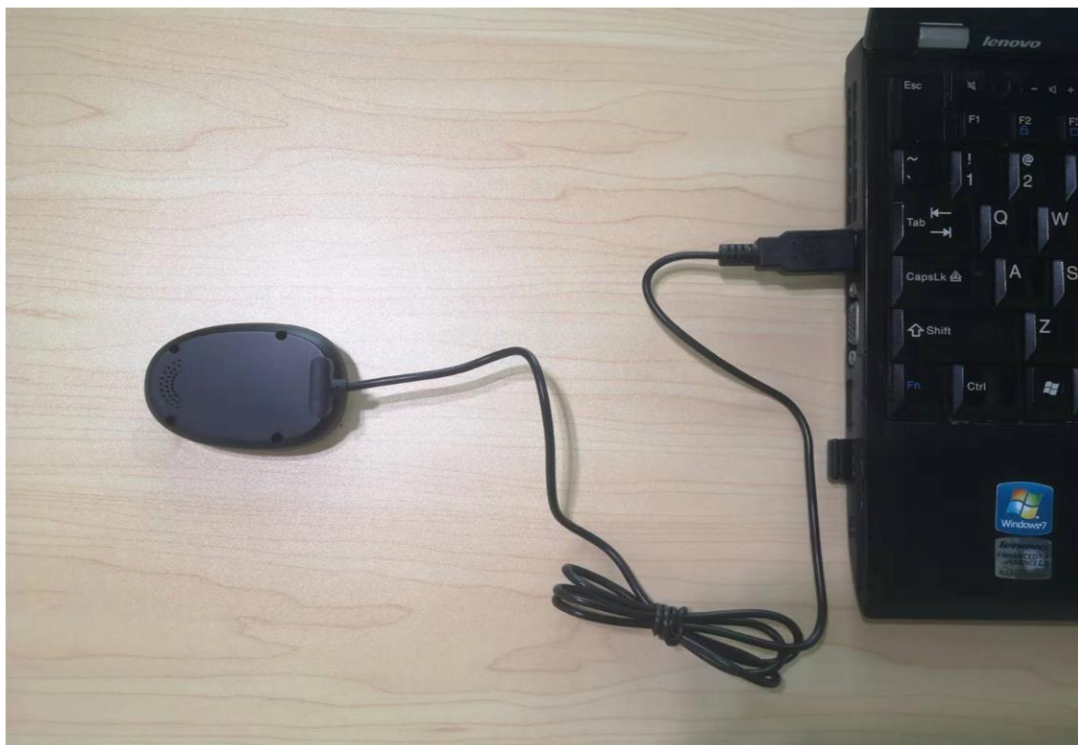

Data cable installation driver

Firmware upgrade suite

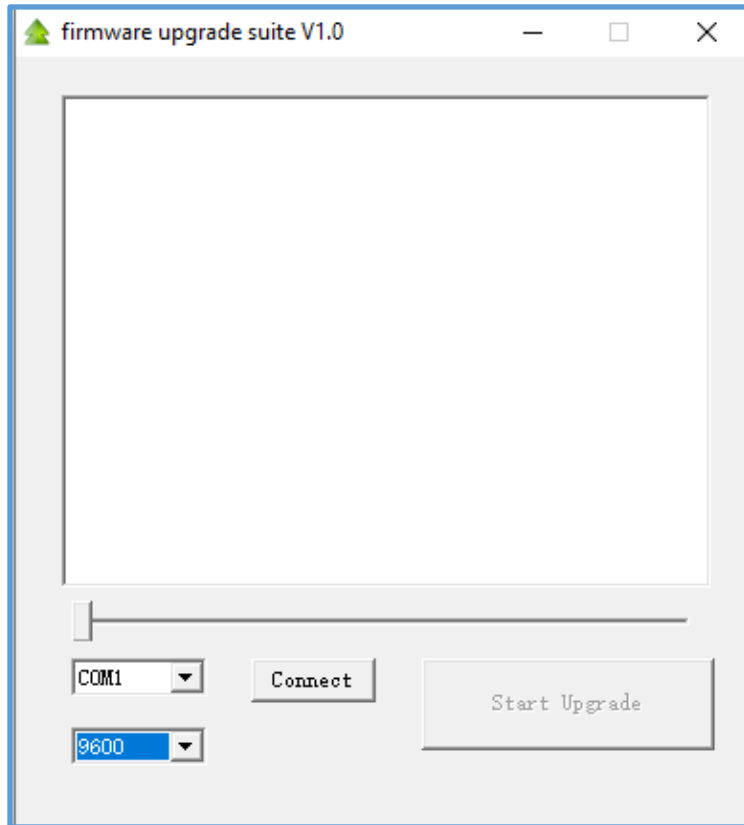

3. Device preparation

Use the black magnetic data cable to connect the device with the PC. Please note the black magnetic data cable should be from us only, it is special design. Other data cables can't work.

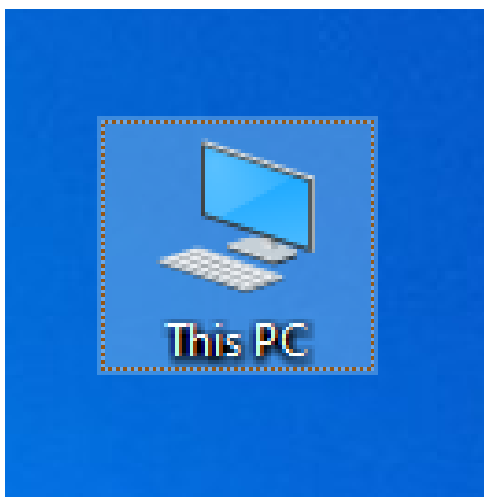

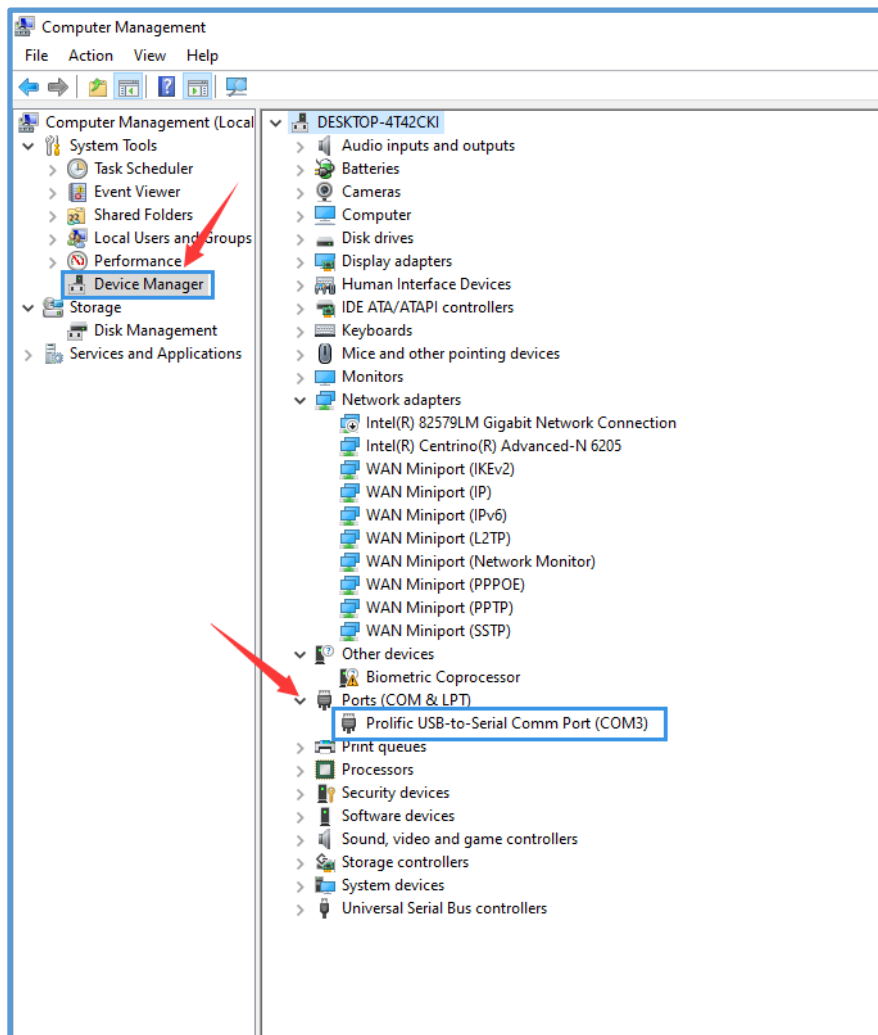

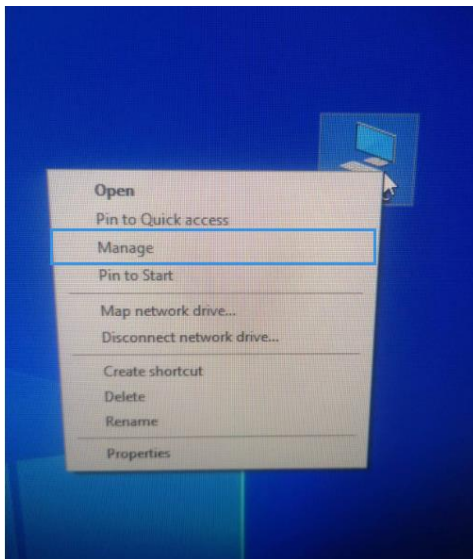

4. Start to upgrade firmware

4.1 After the data cable driver installed, run the firmware upgrade suite software.

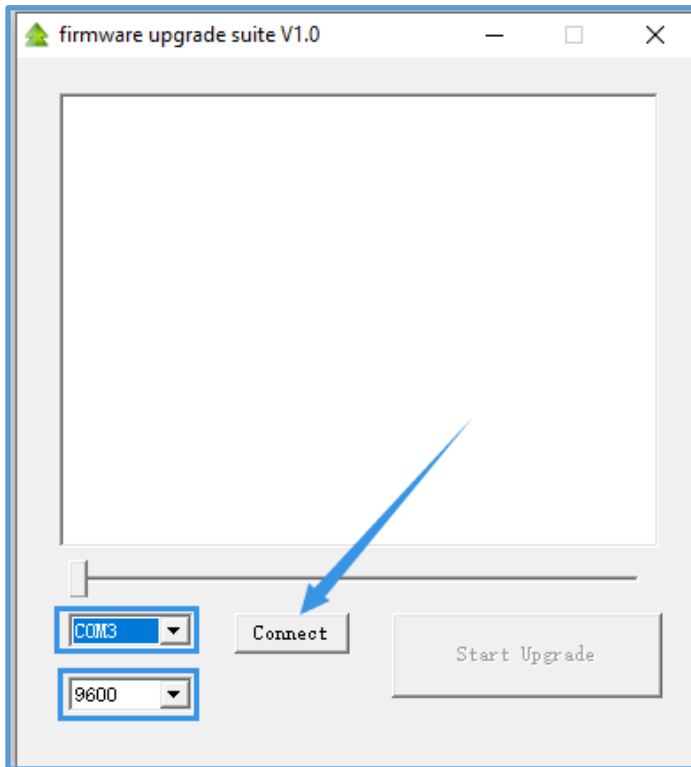

4.2 Right Click **My PC/Manage/Device Manager/Port** to identify correct port "COM3"(COM3 is an example)

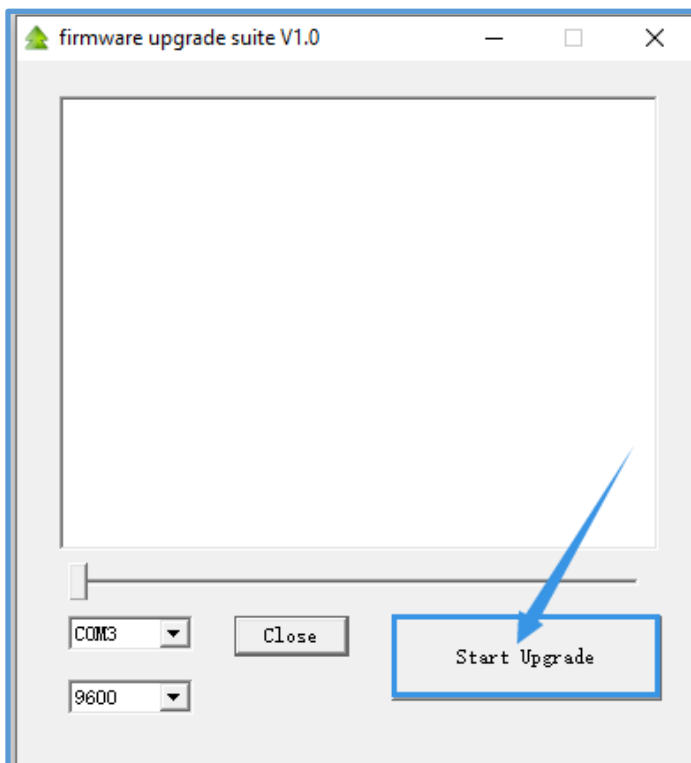

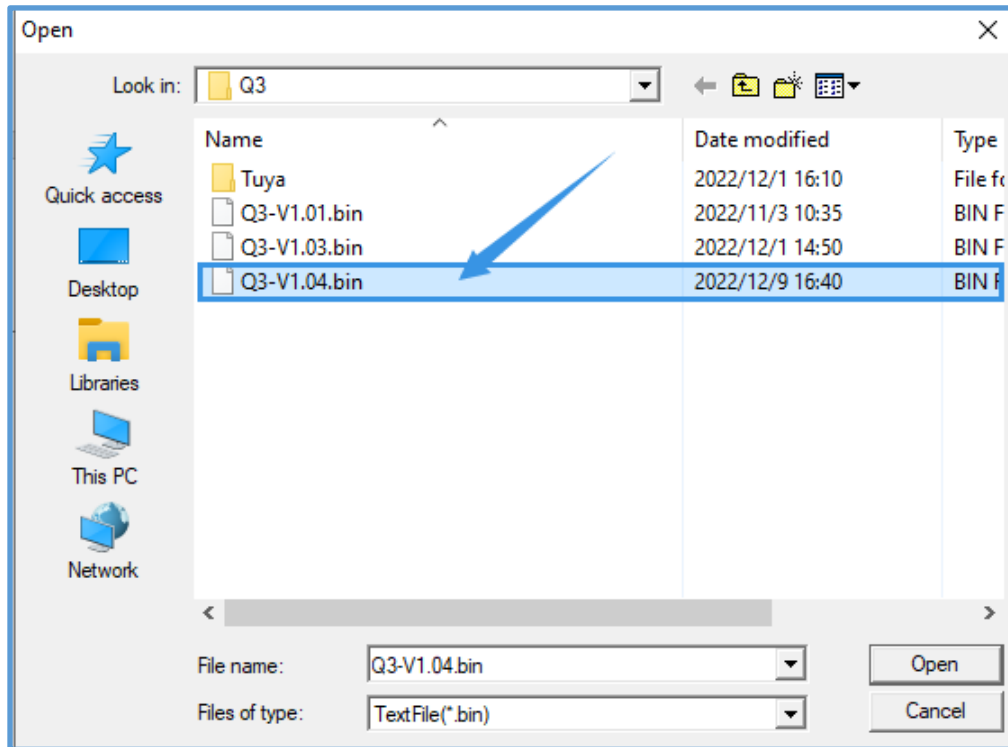

- 4.3** Select the “COM3”, select baud rate “9600” (for our any device models, the baud rate always is 9600), Click” Connect” to open port.

- 4.4** Click “Start Upgrade” to choose firmware bin file

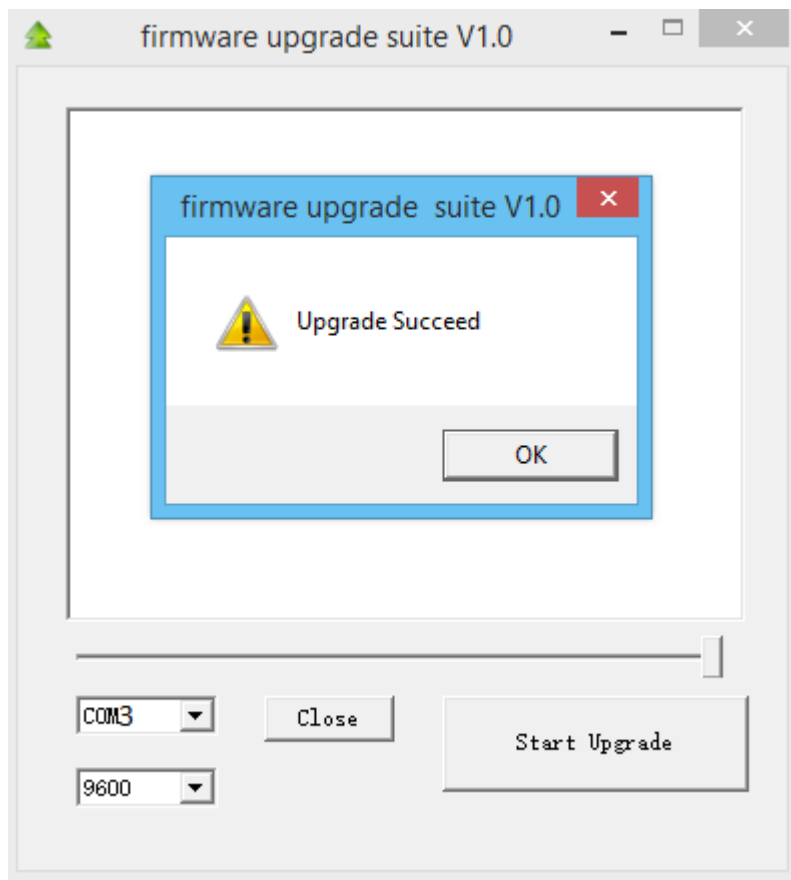

4.5 Left double click to choose the bin file to start upgrade.

4.6 The progress bar will display firmware upgrade status

4.7 After the firmware upgraded successfully, there will be a pop-up windows with “Upgrade Succeed” tips.

Please e-mail us at info@fifotrack.com if any question or feedback.
